Request for Courses in the Core Curriculum

Originating Department or College: Department of Biology and Chemistry, College of Arts and Sciences

Person Making Request: Kenneth J. Tobin

Telephone: (956) 326-2417 E-mail: ktobin@tamiu.edu

Course Number and Title: EPSC 2301 Atmospheric Science Lecture

Please attach in separate documents:

- Completed Catalog Add/Change Form
- Syllabus

List the student learning outcomes for the course (Statements of what students will know and/or be able to do as a result of taking this course. See appended hints for constructing these statements.)

**Student Learning Objectives:** Upon successful completion of this course, students will be able to:

1. Use critical thinking and the scientific method to examine questions relating to atmospheric science.
2. Collaborate effectively on a research project.
3. Communicate scientific information both verbally and through written reports.
4. Define and discuss fundamental earth science principles.
5. Identify and discuss the characteristics of storm systems.
6. Integrate an understanding of how the atmosphere system controls the earth’s weather.
7. Describe and distinguish the development of clouds and precipitation systems.

**Core-Curriculum Learning Outcomes:**

1. Critical Thinking: includes creative thinking, innovation, inquiry and analysis, evaluation, and synthesis of information. (SLOs: 1, 4, 5)
2. Communication Skills: Students will demonstrate their ability to communicate effectively by using written communication. (SLOs: 3, 4, 5)
3. Empirical and Quantitative Skills: includes the manipulation and analysis of numerical data or observable facts resulting in informed conclusions. (SLOs: 4,6)
4. Teamwork: includes the ability to work effectively with others to support a shared goal. (SLOs: 2)

Component Area for which the course is being proposed (check one):

- Communication
- American History
- Mathematics
- Government/Political Science
- Language, Philosophy, & Culture
- Social & Behavioral Science
- Creative Arts
- Component Area Option
- Life & Physical Sciences

Competency areas addressed by the course (refer to the appended chart for competencies that are required and optional in each component area):

- Critical Thinking
- Communication Skills
- Written Communication
- Oral Communication
- Visual Communication
- Teamwork
- Personal Responsibility
- Social Responsibility
Because we will be assessing student learning outcomes across multiple core courses, assessment assigned in your course must include assessment of the core competencies. For each competency checked above, indicate the specific course assignment(s) which, when completed by students, will provide evidence of the competency. Provide detailed information, such as copies of the paper or project assignment, copies of individual test items, etc. A single assignment may be used to provide data for multiple competencies.

Critical Thinking:
Prior to the exam, students will be given a “Pressure System” problem, where they will be asked the question “How can you use an isobar map to distinguish a high or low pressure system.” The students will be assigned to break into groups and use critical thinking skills to determine how these atmospheric conditions drive weather systems around the globe. As a component the following exam, students will be given a two part essay question concerning this question. A critical thinking rubric with domains for creative thinking, depth of inquiry, evaluation of importance and synthesis of information can be scored from the essay response, or the essay can be uploaded for evaluation by the Core Curriculum Assessment Committee.

Communication Skills:
On the exam, for the second part of the “Pressure System” problem, students will be asked write an essay discussing the atmospheric conditions that generate high and low pressure systems and how these features drive global weather conditions. The instructor can score the written essay for organization, focus, style and grammar using a modified WIN rubric, or the written essay can be uploaded for evaluation by the Core Curriculum Assessment Committee.

Empirical & Quantitative Skills:
On the exam, for the first part of the “Pressure System” question, students will be asked to interpret an isobar map to calculate and graph the changes in atmospheric pressure as a high pressure system enters and leaves an area. The instructor can assess the logical reasoning behind the calculation and extrapolations, or the students’ answers can be uploaded for evaluation by the Core Curriculum Assessment Committee.

Teamwork:
The same “Pressure System” assignment can be used to assess teamwork as well. The students will be given a survey to assess their participation on the project as well as an evaluation of their each member’s contribution.

Personal Responsibility: N/A

Social Responsibility: N/A

Will the syllabus vary across multiple sections of the course? __Yes __X_No

Inclusion in the core is contingent upon the course being offered and taught at least once every other academic year. Courses will be reviewed for renewal every five (5) years.

The department understands that instructors will be expected to provide student work and to participate in university-wide assessments of student work. This could include, but may not be limited to, designing instruments such as rubrics, and scoring work by students in this or other courses. In addition, instructors of core courses may be asked to include brief assessment activities in their courses.

Reviewed and approved by the Core Curriculum Committee on February 15, 2013.
