Request for Courses in the Core Curriculum

Originating Department or College: Department of Biology and Chemistry, College of Arts and Sciences

Person Making Request: ________ Marvin E. Bennett ____________

Telephone: ____ (956) 326-2418 ______ E-mail: __mbennett@tamiu.edu

Course Number and Title: GEOL 1103 Physical Geology Lab

Please attach in separate documents:
___ Completed Catalog Add/Change Form
____X Syllabus

List the student learning outcomes for the course (Statements of what students will know and/or be able to do as a result of taking this course. See appended hints for constructing these statements.)

**Student Learning Objectives:** Upon successful completion of this course, students will be able to:

1. Use critical thinking and the scientific method to examine questions relating to geology.
2. Collaborate effectively on a research project.
3. Communicate scientific information both verbally and through written reports.
4. Review and demonstrate a knowledge of fundamental earth science principles
5. Define and discuss geological processes that alter the earth's surface.
6. Develop the ability to classify earth materials.

**Core-Curriculum Learning Outcomes:**

1. Critical Thinking: includes creative thinking, innovation, inquiry and analysis, evaluation, and synthesis of information. (SLOs: 1, 5, 6)
2. Communication Skills: Students will demonstrate their ability to communicate effectively by using written communication. (SLOs: 3, 5)
3. Empirical and Quantitative Skills: includes the manipulation and analysis of numerical data or observable facts resulting in informed conclusions. (SLOs: 1, 2)
4. Teamwork: includes the ability to work effectively with others to support a shared goal. (SLOs: 2)

Component Area for which the course is being proposed (check one):
___ Communication ___ American History
___ Mathematics ___ Government/Political Science
___ Language, Philosophy, & Culture ___ Social & Behavioral Science
___ Creative Arts ___ Component Area Option
____X Life & Physical Sciences

Competency areas addressed by the course (refer to the appended chart for competencies that are required and optional in each component area):
___X Critical Thinking ___ Teamwork
____X Communication Skills ___ Personal Responsibility
   ___X Written Communication ___ Social Responsibility
   ___ Oral Communication ___
   ___ Visual Communication ___
____X Empirical & Quantitative Skills
Because we will be assessing student learning outcomes across multiple core courses, assessment assigned in your course must include assessment of the core competencies. For each competency checked above, indicate the specific course assignment(s) which, when completed by students, will provide evidence of the competency. Provide detailed information, such as copies of the paper or project assignment, copies of individual test items, etc. A single assignment may be used to provide data for multiple competencies.

Critical Thinking:
During the “Plate Tectonics” lab, students will need to use their critical thinking skills to calculate the rates of lithosphere plate movement and direction to predict both the interaction of plates and the geological features that occur at various plate boundaries. A critical thinking rubric with domains for creative thinking, depth of inquiry, evaluation of importance and synthesis of information can be scored by the instructor from the lab report, or the lab report can be uploaded for evaluation by the Core Curriculum Assessment Committee.

Communication Skills:
Upon the completion of the “Plate Tectonics” lab each student will write a 3-4 page lab report addressing critical thinking questions concerning their calculations and geological extrapolations. The instructor can score the written lab report for organization, focus, style and grammar using a modified WIN rubric, or the report can be uploaded for evaluation by the Core Curriculum Assessment Committee.

Empirical & Quantitative Skills:
During the “Plate Tectonics” lab students will have to use the absolute motion of one plate to calculate the relative motion of interacting plates in order predict how the plates will interact at the boundaries and the geological features that will occur. The instructor can assess the logical reasoning behind the calculations and extrapolations, or the written lab report can be uploaded for evaluation by the Core Curriculum Assessment Committee.

Teamwork: N/A

Personal Responsibility: N/A

Social Responsibility: N/A

Will the syllabus vary across multiple sections of the course? ___ Yes ___ X_ No

Inclusion in the core is contingent upon the course being offered and taught at least once every other academic year. Courses will be reviewed for renewal every five (5) years.

The department understands that instructors will be expected to provide student work and to participate in university-wide assessments of student work. This could include, but may not be limited to, designing instruments such as rubrics, and scoring work by students in this or other courses. In addition, instructors of core courses may be asked to include brief assessment activities in their courses.

Reviewed and approved by the Core Curriculum Committee on February 15, 2013.
