Texas A&M International University
Annual Institutional Effectiveness Review (AIER)
for Academic Programs

Program: Bachelor of Science in Interdisciplinary Studies with a Major in Mathematics with Grades 4-8 Certification

Assessment Period Covered: January 1, 2009 to January 31, 2010

Program Coordinator (Preparer of Report) Dr. Eduardo Chappa

The Annual Institutional Effectiveness Review for Academic Programs is directed at Goal 1: Academics of the Texas A&M International University 2006-2010 Strategic Plan:
Develop, maintain, assess, and improve academic programs, administrative/educational support services and student services, to admit, retain, and graduate students who achieve established learning outcomes designed to prepare them for success in their chosen careers.

Institutional Mission
Texas A&M International University, a Member of The Texas A&M University System, prepares students for leadership roles in their chosen profession in an increasingly complex, culturally diverse state, national, and global society … Through instruction, faculty and student research, and public service, Texas A&M International University embodies a strategic point of delivery for well-defined programs and services that improve the quality of life for citizens of the border region, the State of Texas, and national and international communities.

Academic Program Mission
The faculty and staff of the Department of Mathematical and Physical Sciences are committed to excellence in teaching, research, service, and outreach. The programs within the Department lead to discovery, analysis, and dissemination of the knowledge of astronomy, computer science, engineering, mathematics, physics, and statistics. The Department provides a foundation in its disciplines for all graduate and undergraduate students as well as for teacher certification programs for mathematics and physical sciences majors. Our goals are to equip the graduates
with the tools necessary to fully participate in a technological society and competitive global environment. The Department is committed to:

• Transmit ideas and knowledge pertaining to disciplines within the Department through teaching, including active learning, and related activities.

• Contribute to the advancement of the disciplines within the Department through quality research and sponsored projects.

• Utilize the Department's resources to serve the University and community.

• Serve as a resource of knowledge and pedagogy of the disciplines within the Department for the benefit of the University and community through outreach activities.

Provide summary of the last cycle’s use of results and changes implemented
Program faculty should evaluate the former cycle. This statement should specify if the outcomes addressed were a continuation of previous ones, new outcomes, or modified versions of previous outcomes. In addition, the statement should include a concise analysis of the assessment data collected during the previous year, a brief explanation of actions taken to address specific outcomes, an evaluation of how these actions contributed to the improvement of the program, and any recommendations formulated. Assessment data—including actual samples of student work—must be viewed and discussed by program faculty during this process.

The Department of Engineering, Mathematics, and Physics decided to assess two outcomes for this program during the 2008-2009 cycle. These were related to communication and student success in their chosen careers.

In the communication outcome we learned that some of our efforts to improve communication we had to do a few intentional efforts, such as,

- Give students the opportunity to have submitted papers reviewed before a final grade was assigned to it; this would give students an opportunity to think and improve their writing;
- Give students the opportunity to practice an oral presentation in front of their peers;
- Provide a clear example of a paper that students need to read before they write about ethics in Mathematics careers.

Changes that address all of the issues identified during the last cycle are being implemented as a result in the Fall 2009 semester.

In regards to the outcome about student success in their chosen career we identified a few problems; namely,

- students lack familiarity with the TexES test environment. As a result students will be required to familiarize with the test through activities in a capstone course;
- there is a lack of understanding of the relationship between the contents of the corresponding TexES exam and the contents of required courses for this program. As a result a study will be carried out during Fall 2009 by program faculty to understand this relationship and understand if there is any need to modify current courses in the program.
Selected list of program-level intended student learning outcomes *(It is recommended that programs rotate through their entire set of outcomes over a multi-year period. Programs may focus on one or two outcomes each year, as deemed appropriate).*

1. Students will be able to communicate effectively in written and oral forms, work successfully in teams, and understand ethical responsibilities.
2. Students will be able to think critically and be prepared for life-long learning.
3. Students will be able to continue graduate studies in Mathematics Education or related field.
4. Students will be able to pass the corresponding TExES examination.
5. Students will be able to apply new methodologies of teaching.

<table>
<thead>
<tr>
<th>Section I: Planning and Implementation</th>
</tr>
</thead>
</table>

**Outcome(s)**
*Identify the outcome(s) that will be focused upon this year.*

1. Students will be able to communicate effectively in written and oral forms, work successfully in teams, and understand ethical responsibilities.

☐ Please indicate if the outcome(s) is (are) related to writing (QEP).

**Methods of assessment to be used:** *The explanation should identify and describe the type of assessment(s) that will be used (e.g., survey, questionnaire, observation instrument, test, rubric to evaluate performance, standardized examination, action research, interviews, etc.), who will provide the information, and how the data will be obtained.*

The course MATH 2371, Communication in Mathematics, will be used to compile data. Papers from the students will be collected and graded using the rubric attached to this document. Students will also write an essay about ethics, and give at least one oral presentation in the course. A rubric to evaluate oral presentations has been developed, and is submitted together with this report.

**Indicate when assessment(s) will take place**

Data will be collected through Fall 2009

**Criteria/Benchmark(s):** *[Specify, if deemed appropriate to assess outcome(s). Criteria/benchmark(s) may be optional, especially if qualitative measures are used for data collection.]*

100% of the students in this degree program will receive at least a grade of 3 in their paper using the rubric attached to this document. 100% of the students will receive a “B” in their paper about ethics, and 100% will obtain at least a grade 3 in the rubric for oral presentations.

**Outcome(s)**
*Identify the outcome(s) that will be focused upon this year.*

4. Students will be able to pass the corresponding TExES examination.

☐ Please indicate if the outcome(s) is (are) related to writing (QEP).
Methods of assessment to be used: The explanation should identify and describe the type of assessment(s) that will be used (e.g., survey, questionnaire, observation instrument, test, rubric to evaluate performance, standardized examination, action research, interviews, etc.), who will provide the information, and how the data will be obtained.

Pre-service teachers (students) will take The Texas Examinations of Educator Standards in mathematics for grade 4-8 (TExES Field 115). Domains I (Number Concepts), II (Patterns and Algebra), III (Geometry and Measurement), IV (Probability and Statistics), as well as Domain V (Mathematical Processes and Perspectives) of the Test Framework as defined by Texas State Board of Educator Certification will assess this outcome.

Indicate when assessment(s) will take place

Annual

Criteria/Benchmark(s): [Specify, if deemed appropriate to assess outcome(s). Criteria/ benchmark(s) may be optional, especially if qualitative measures are used for data collection.]

66% of the students taking the standardized test will score at or above the passing grade for the exam (currently, 240 points).

Section II: Analysis of Results

What were the results attained?
Describe the primary results or findings from your analysis of the information collected. This section should include an explanation of any strength(s) or weakness(es) of the program suggested by the results.

The table entitled “Written Paper Report” shows the results of the assessment for all students in this degree. In order to assess this outcome, we use the rightmost column in this table, that is, the average of each student in all of these categories. From the table one can see that 2 out of 3 students (66%) reached the benchmark. The data is very homogeneous in the sense that all areas seem to be as good as any other area. The best being “Understanding of Mathematical Concepts”, and “Proof Writing”, followed closely by “Explanation of Mathematical Concepts” and “Grammar”.

The table entitled “Writing on Ethics” shows the results of the assessment for all students in this degree. From the table one can see that 3 out of 3 students (100%) reached the benchmark.

The table entitled “Oral Presentation Assessment Results” shows the average of the results obtained by each student in each area. In order to assess this outcome, we use the rightmost column in this table, that is, the average of each student in all of these categories. From the table one can see that 3 out of 3 students (100%) reached the benchmark. Assessment was conducted during the first week of December in 2009. The topic of the presentation was the content of their paper. Students show that they have mastered the content knowledge of their paper, as well as the mechanics, delivery and other points of their presentation.

</tbody>
</table>

The table entitled “MATH 115, TExES Examination Results for 2009” shows the results of the TExES exam in 2009 for students that graduated in this degree program. In this case, 3 out of 5 students (66%) passed the exam. Domains I (Number Concepts) and II (Patterns and Algebra) are above or at the passing grade (240 points), while domains III (Geometry and Measurement), IV (Probability and Statistics), and V (Mathematical Processes and Perspectives) are below passing grade.

What were the conclusions reached?

Should include a brief description of the procedure used for reaching the conclusion(s) based on the evidence collected and describe the process used to disseminate the information to other individuals. For example, if the discussion took place during the annual spring retreat, include a summary from those deliberations using the Meeting Minutes template found on the Project Integrate web page at http://www.tamiu.edu/integrate/docs/Minutes-Template.doc. Once completed, submit the minutes to assessment@tamiu.edu.

For outcome 1, the results of the assessment show that students made progress in their goal to communicate Mathematics, and in the mean time they understood ethics in Mathematics. The plan to address writing must be improved to account for the area of explanation of mathematical concepts as well as grammar (each of these areas passed the benchmark, but they are the weakest).

For outcome 2, results are comparable to the results last year (5 out of 7 students passed). Moreover, most students pass this exam no later than their second attempt. In order to understand how to help better students, faculty involved in this program were asked to match the contents of the exam with course content that they teach. Almost all topics were mentioned as covered.
Describe the action plan formulated. (The plan may be multi-year in nature.)
Based on the conclusion(s), describe the action plan to be implemented to improve or maintain student learning, including a timeline for implementation.

Special care will be given to the content of the paper and we will work with each student so that they understand better how to explain concepts and improve their grammar.

A copy of the topics that are not being covered in any of the required courses will be sent to the Department Curriculum Committee for their analysis.

In order for students to have access to the test materials, specialized test preparation software has been installed in room LBVSC 205. This software provides examination materials, sample tests, and feedback for all domains generally found in the TExES exams.

The software installed was:
"Simulados(R) Software TestSim(R)
Simulated Test for the TExES Certification Exam:
Copyright (C) 2009 Simulados (R) Software, Ltda."

The computer lab is open from 9:00 am to 5:00 pm Monday through Friday. TAMIU students are aware of the availability of this software. Plans are underway to install more copies of this software. A rigorous approval process for examinees has also been implemented to make sure students know what the contents of the test is before they actually take the exam.

Section III: Resources

Resource(s) to implement action plan:
Describe the resources that will be needed to implement the action plan. Also indicate if the resources are currently available, or if additional funds will be needed to obtain these resources.

Funding
☐ New Resources Required
☐ Reallocation of current funds

Physical
☐ New or reallocated space

Other
☐ Primarily faculty/staff time
☐ University/rule procedure change only

Provide a narrative description and justification for requested resources (include linkage to Strategic Plan)

Enter text here
Identify proposed outcomes for the next assessment cycle:

Continuation of present outcome(s) – (Indicate reason for continuation):

We will continue to attempt to assess the same outcomes, since these are one of the most important steps that a student must go through in this program.

New Outcome(s) – (List outcomes below):

Enter text here

Modification of present outcome(s) – (Indicate reason for modification):

Enter text here

Date Completed: March 1, 2010

Submit completed form to integrate@tamiu.edu

Updated 09/03/2009
