

Department of Mathematical and Physical Sciences Presents

The 2008 Colloquium

Thursday, April 17, 3:00-4:00pm

Room: LBV 102, TAMIU

Open to Public and Refreshment Starts at 2:30pm

Dr. Jerome Keating

Peter T. Flawn Professor, Chair Department of Demographics, UTSA

**Title: Population Change in Texas: Implications for Human
and Socioeconomic Resources in the 21st Century**

Abstract

In this talk we discuss population growth in, migration within and immigration to Texas and immigration over the next 40 years. As population continues to decline, rural areas will lose population and urban areas will be more densely populated. The population of Texas will soon become predominantly Latino and we discuss changes that need to be made to reposition state's workforce among the best in the country. Without intervention the technical expertise of the Texas workforce may fall to the bottom of the 50 states by 2050.
