

# BOOT CAMP SUMMER 2016

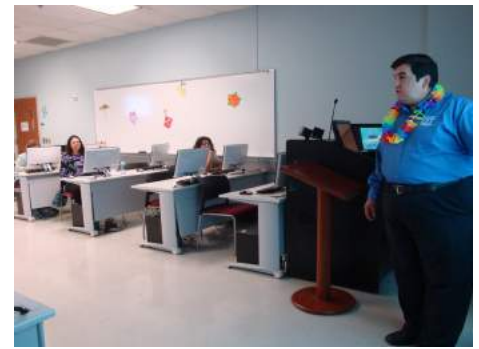

## SoftChalk Cloud Training

SoftChalk Cloud is the award-winning digital curriculum authoring solution that combines content authoring, learning object repository, hosting, and management features with an easy way to track student score results and the ability to integrate seamlessly with Blackboard. It is designed for educators, curriculum developments, instructional designers and students who need an easy-to-use, yet powerful platform that makes it easy to create engaging, media-rich learning content that is portable and flexible.

Using Create in SoftChalk Cloud makes it easy to include interactive quiz questions and activities such as HotSpot images, Timelines and sorting activities in your digital lessons. Apply a design template and your content and take half the time with a designer made look.

SoftChalk Cloud enables quick and easy content management—you can create and manage one content item that can be delivered in many courses. When it's time to update—just change your content one time in the Cloud, and every course and every LMS using that content is automatically updated. Now that's efficient!

The first Summer 2016 Boot Camp held June 6 - 7, 2016 in Cowart Hall 112 was a great success. The Office of Instructional Technology and Distance Education provided a 1½ training workshop for 9 professors eager to get a jump start on the design of their Summer and Fall courses. Professors not only received expert training on the application, but were able to apply the training to their courses with one-on-one support from the eLearning staff.
