Changing the Face of Education
Higher Education & Technology
What do you want out of life?

Texas’ newest University welcomes you with 58 undergraduate, graduate or doctoral degrees delivered by a gifted faculty in a remarkable international setting where dreams come true daily.

A Chance to Dream
A Place to Grow
A Future Secured
A Life Fulfilled

TEXAS A&M INTERNATIONAL UNIVERSITY

For Undergraduate or Graduate Admissions Information, or to Schedule a Campus Tour Call 956.326.2270 or e-mail: enroll@tamiu.edu or visit: www.tamiu.edu/apply
Mission: Prism is published twice a year for Texas A&M International University friends. By highlighting the University’s life and that of its programs, faculty, students and alumni, Prism reflects the diverse educational excellence of Texas’ fastest growing University.

Texas A&M International University is committed to the preparation of students for leadership roles in their chosen profession and in an increasingly complex and culturally diverse state, national and global society.
A significant academic and intellectual benefit accrues, I think, to a four-year finish... It seems probable that memory of what one has studied becomes somewhat blurred for students whose course of study spans six years or more.”

Dr. Ray Keck III

On Being “On Time”

In a recently published and enormously popular novel, The Rule of Four, the narrator describes how a university student perceives time.

Strange thing, time. It weighs most on those who have it least. Nothing is lighter than being young with the world on your shoulders; it gives you a feeling of possibility so seductive, you know there must be something more important you could be doing than studying for exams.

From the earliest days of the academy, recorded in exchanges between students and teachers in Plato’s dialogues, training of the mind has co-existed, uneasily, with the distracting exuberance of youth. Ingrained in our imagination, the carefree college student—young, hopeful, uncommitted—divides unevenly his or her energy between study and the more enticing allure of a world unknown, unfamiliar, untried. For a student, the light, imperceptible passing of collegiate time gives no warning of the rush and frenzy awaiting. Only those with little time—teachers, parents, professionals—can feel its weight. Today in Texas, however, the insouciant student may be an experience and a myth whose time has past.

Even as we universally acknowledge the need for all citizens to participate in higher education, even as the Texas Higher Education Coordinating Board (THECB) presses forward its “Closing the Gaps” campaign to enroll an additional 500,000 students in colleges and universities by 2015, funding streams are stagnant and shrinking. At the same time, university study is more costly and stretches over more years than ever before. The traditional expectation of four years to complete a baccalaureate program is today, in public universities, a chimera. At UT-Austin, only 37.2% of undergraduates finish in four years; at A&M-College Station, 31.6%. At regional universities, serving non-traditional populations and large numbers of students who must care for their families and work as they study, graduation rates are substantially lower. At the University of Texas-El Paso, only 2.9% of students finish in four years; at UTSA, 7.5%; at UT-Pan American and A&M-Kingsville, 6.6%. In Laredo, at Texas A&M International University, 16.6% graduate in four years.

Faced with a growing population, static funding, and a conviction that education is a right and not a privilege for all Texans who meet admissions standards, Senator Judith Zaffirini authored (together with Senator Geanie Morrison) SB 4, “B-On-Time.” The idea of rewarding prompt and effective completion of undergraduate study was first proposed by Lieutenant Governor David Dewhurst. As a candidate for Lieutenant Governor, Mr. Dewhurst suggested that student loans be forgiven for those who graduated in a timely fashion and with at least a B-average. Working with Mr. Dewhurst, Senators Zaffirini and Morrison crafted a bill to provide student loans to cover budgeted items including tuition, fees, transportation, books, and living expenses, reviewed and approved by the Texas Higher Coordinating Board. Most important, for students who maintain a B-average and finish their baccalaureate degree in four years, the loans will be forgiven. In short, this program, if fully funded, will assist all Texans with the largest portion of their college costs provided they get in, get focused, get moving, and get out.

As the dismally low four-year graduation rates above show, however, “B-On-Time” would today reach only a few Texans. Senator Zaffirini, in speaking with students, faculty, and administrators at our University, urges us that “the time has come to initiate a paradigm shift in how we think of higher education in Texas. Students need to take advantage of all entitlements and scholarships, borrow additional funds if needed, and finish in four years. We cannot continue to fund a four-year education over 10 years. Timely graduation is cost-effective not only for students and their families. It results in completing degree requirements at a lower cost to everyone and ensures that graduates enter the workforce earlier while creating university vacancies for new students.” Her bill provides a substantial subsidy for those students able to move quickly through their degree plans and exit the University, to enter quickly the marketplace, freeing classroom space for a
Where in the U?

The Texas A&M International University seal is on parking permits, letterhead, and even the large billboard on Bob Bullock Loop 20. But maybe you haven’t noticed the physical version of the seal, embedded in the concrete outside of the Sue and Radcliffe Killam Library, facing the flagpoles.

Every element in the seal has meaning. Each of the 23 border scallops represent one year of the University’s existence prior to becoming TAMU on September 1, 1993. The University’s name circles a globe depicting the Americas, a suggestion of the international vision of TAMU. The continents are traversed by a three-dimensional, futuristic, geodesic surface, in homage to the future provided by a higher education degree. Finally, the single star represents the University’s membership in The Texas A&M University System and the State of Texas.

Dr. Ray M. Keck III, President
Hispanic Studies Ph.D. Dream Come True at TAMIU

At first, it was a dream, a wish for more -- but without a practical path to achievement. Then Texas A&M International University announced the Texas Higher Education Coordinating Board had approved its collaborative Ph.D. in Hispanic Studies, the first of its kind in Texas. Lola Orellano-Pérez, director of the TAMIU International Language Institute, knew the time was now.

As the first person to receive the Master of Arts in Spanish from TAMIU, Orellano-Pérez explained the Ph.D. was a logical continuation of her studies, but had always been out of reach.

"Even after I received my degree from TAMIU, I continued taking classes, doing research. I looked around for doctoral programs, but realistically, as a single mother with six children, I could not just pack up my family and move to another city," she said.

Selected as part of the program’s first cohort, Orellano-Pérez will pursue a degree in one of four overlapping concentrations: Hispanic Language and Literature, Hispanic Cultural Studies, Linguistics and Pedagogy and Bilingual and Bicultural Studies. Courses will be taught at TAMIU and via distance education with faculty members from other A&M System schools, including Texas A&M University – College Station.

After completing their studies, students receive their doctorates from TAMU.

Lisa Flores, director of the Office of Student Activities and fellow first cohort member, said the new program would allow her to study with professors she might not otherwise meet.

"I’m excited that this opportunity will connect us to a wide variety of professors both here and throughout The Texas A&M University System. With their guidance, I hope to broaden my knowledge base in Hispanic Studies, so I can ultimately engage in teaching and research at the university level," said Flores.

Currently the executive director of the Office of Programs for Academic Support and Enrichment, Concepción Hickey has worked at TAMIU in some capacity for nearly 26 years. She is pursuing the advanced degree for self-enrichment, knowledge, and to continue to improve TAMIU.

"I will continue working and plan to be a part-time student. I am more interested in the learning process at my age than in acquiring any title," said Hickey, "My purpose is to grow intellectually and gain knowledge that will be useful to the students I come in contact with and the programs I direct. I want to contribute to this university that has given me an enriching and rewarding work experience."

Dr. Nasser Momayezi, dean of the College of Arts and Sciences, said the degree would elevate the local community’s interests to the highest academic level.

"The creation of the Ph.D. in Hispanic Studies indicates the growing importance of understanding and studying a much overlooked community. The work emerging from this program will be valuable not only to South Texas, but nationwide," said Dr. Momayezi.

The first cohort will consist of the three TAMIU students, one student from Texas A&M University – Kingsville and eight students from Texas A&M University – College Station. All will begin classes in the Fall. TAMIU professors who will teach in the program include Dr. Kati Pletsch de García, acting program director at TAMIU, Dr. Ezra Engling and Dr. José Cardona-López.

For more information about the program, please contact Dr. Pletsch de García at 326.2614 or visit offices in the Sue and Radcliffe Killam Library, room 428B.

Jessica Ratliff

Lisa Flores, Dr. Nasser Momayezi, Dr. Kati Pletsch de García, Conchita Hickey and Lola Orellano-Pérez
in Red River Athletic Conference (RRAC) regular season play before sweeping two games in the conference tournament and advancing to the NAIA Region VI Tournament. TAMIU finished with an outstanding 17-5 overall record.

Claudio Arias takes over as head coach of the men’s soccer program after a highly-successful four-year stint as head coach at Southern Wesleyan University, an NAIA school in South Carolina. He has recruited several outstanding student-athletes to go along with 10 returning letterwinners from last year’s squad.

Amongst those returning to the squad are juniors Daniel Hermosillo and Jesús Sánchez. Hermosillo finished in the top-20 of the final NAIA statistical rankings last season in scoring, assists and total points while Sánchez earned RRAC Most Valuable Player and NAIA honorable mention All-American honors.

The volleyball team will try to achieve its third straight winning season in 2004. TAMIU has a combined 42-17 record in its first two seasons of competition. Last year’s team went 19-11, advancing to the semifinal round of both the RRAC and NAIA Region VI postseason tournaments. TAMIU won the RRAC West Division title in the program’s first year of existence in 2002.

Head coach Binny Canales has seven letterwinners returning from last year’s squad, including senior
Jessica Vargas. After transferring from UT-Brownsville, Vargas achieved an outstanding inaugural season for the Dustdevils in 2003. In addition to earning RRAC first-team All-Conference honors she was named RRAC co-Newcomer of the Year and to the NAIA All-Region VI team.

After showing dramatic improvement from its first to second season the women's soccer team knows that 2004 can be very special. After going 3-16 in 2002 TAMIU recorded a 9-9-2 record last season, going 3-1-1 over the last five games of the season to reach the .500 mark.

A total of seven starters and 10 letterwinners return for head coach Sandra Forestier's team. Among returning starters are junior Erika Alcaráz and sophomore Iliana Rodela. Alcaráz is the team leader in goals over the last two seasons with 21 while Rodela led the team in scoring last season with 10 goals.

Head coach Javier Coronado has recruited a great deal of talent to blend with a solid corps of returnees as TAMIU enters its second season of men's and women's cross country competition. A total of six letterwinners will return for the women and three letterwinners for the men.

The top returnee for the men is senior Mark Vela, who qualified for the NAIA National Championships last season after a strong showing at the NAIA Region VI Championships. Sophomore Priscilla García and senior Anetra Matthews return for the women's team. García was TAMIU's top finisher in three of five races in which she competed last season while Matthews was TAMIU's top finisher at the NAIA Region VI meet.

Also playing in their second seasons of competition in 2004-05 will be the men's and women's basketball teams. Considering the success achieved by both teams last season, anticipation is high for the upcoming season, which tips off in November.

The women's basketball rebounded from a 1-14 start in its inaugural season with a 13-6 record over the last 19 games to finish with a 14-20 overall record. The Dustdevils advanced to the semifinal round of the RRAC postseason tournament after a quarterfinal round road win over Huston-Tillotson.

The men's basketball team won its final three games of the season to finish in double-figures in wins with a 10-22 overall record. The highlight of the season was a late-season road win over NCAA Division II foe Incarnate Word.

New golf coach Richard Marroquín, Jr. has enthusiastically embraced the process of building a collegiate golf program. Both Dustdevil golf teams will compete against the top small college teams in Texas next spring as they strive to establish winning programs.

With nine programs and competition from late August until April there will be plenty of excitement surrounding Texas A&M International University Athletics in 2004-05. The community is invited to join in the excitement as Laredo's hometown college teams shoot for conference championships and beyond.

For additional information, call TAMIU Athletics at 326.2891 or click on http://www.tamiu.edu/athletics/
University Survey Looks at Laredo

How do you define home?

Is it the four walls that embrace us at the end of the day...or is it the larger community that we move through daily, extracting life and love as we make our way?

Whatever its definition, can a home be more and can or should a community service mission. This is what universities do,” said Dr. Michael Patrick, TCBEED director and survey leader.

The phased effort included data-gathering and analysis in August and September; community-based discussion groups that will meet in October; the development of a plan of action throughout October-November and an implementation of that plan in January, Dr. Patrick explained.

He said the survey, conducted by TAMIU students, involved multiple survey opportunities for community feedback.

“For example, our students did traditional intercept surveys at various stores and public gathering areas. In addition, we presented the survey to numerous local civic and social groups as well as the city’s largest employers. Students were also involved in targeted phone surveys. Finally, a web site with the bilingual survey was available on the University’s web site and was linked to from many of the community’s most popular web sites including The Laredo Morning Times, City of Laredo, KGNS-TV, Laredo Development Foundation, Laredo Chamber of Commerce and Laredo Convention and Visitors Bureau.

Patrick said response to the survey has been heartening.

“These are difficult questions for any community to ask itself, but necessary in order to assure the community’s growth, development and relevance to its citizenry. We’ve been very heartened by the community’s response,” he said.

Laredo Speaks/Habla Laredo was assisted by funding partnerships including The Laredo Convention and Visitors Bureau, the Laredo Development Foundation and The Laredo Morning Times.

(EDITOR’S NOTE: At the time of this writing, analysis of survey results was underway. Those results will be available to the public on the University’s web site after Oct.1.)

Steve Harmon
JONATHAN WITHERSPOON

1996, MBA-International Banking Vice President - Commercial Operations for JP Morgan Chase & Co Dallas

Now:
Vice President – Commercial Operations for JP Morgan Chase & Co.

How Being An Alum Helps:
I was contacted prior to graduation by someone I had worked with previously. This person was leading a project and he felt that my MBA experience could benefit his project.

Proud of:
That I’ve had the opportunity to develop friendships/work relationships with people whom I respect and that I aspire to be more like in my life (e.g. Sergio Alvarez whom I met at TAMIU). Getting involved in my community by being vice president of my town’s Economic Development Corporation.

Lessons Learned:
Try to keep in touch! I remember working closely with the professors on interesting research papers, working in the NAFTA research center, the food in Laredo, and the friends I made from all over the world... I wish I could know where they all are now - I hope this helps me get in touch with them!

Biggest Surprise to Your Classmates:
My wife still has not realized that she can do better than me! I like to play golf and I like to do ranch work (riding horses and working cattle, sheep, and goats).

Ever Get Back?
I have once. I’d like to more often.

2000, BS, Criminal Justice Foster Care Worker, Lutheran Social Services of the South, Inc. Laredo

ROGER V. ALLEN

Now:
Since graduation, a social worker tending to the needs of children that have experienced or are at risk of experiencing neglect

How Being An Alum Helps:
All of the jobs that I have had since I graduated have been through my classmates from TAMU. My current supervisor is also a TAMU Alumni and through such networking, am able to secure my great position filling such a great purpose for many in need.

Lessons Learned:
I have realized that there were many obstacles to overcome in my classes… those times have made me realize that in real life, we have tests almost every day. My college experience has helped me to overcome many obstacles.

Biggest Surprise for Your Classmates:
What would surprise my classmates about me is the fact that I do not party as much as I used to at all.

Proud of:
I am a proud Laredoan... I live in Laredo, and if I have to leave, it would be for very special reasons, but I would find ways to return to Laredo.

JONATHAN WITHERSPOON

1996, MBA-International Banking Vice President - Commercial Operations for JP Morgan Chase & Co Dallas

Now:
Vice President – Commercial Operations for JP Morgan Chase & Co.

How Being an Alum Helps:
I was contacted prior to graduation by someone I had worked with previously. This person was leading a project and he felt that my MBA experience could benefit his project.

Proud of:
That I’ve had the opportunity to develop friendships/work relationships with people whom I respect and that I aspire to be more like in my life (e.g. Sergio Alvarez whom I met at TAMIU). Getting involved in my community by being vice president of my town’s Economic Development Corporation.

Lessons Learned:

Ever Get Back?
I have once. I’d like to more often.
Now:
My job entails identifying, researching and cultivating relationships with corporations and foundations to establish partnerships that financially support University programs and projects. I am also beginning school this fall at Loyola’s Graduate School of Business, where I will work towards a Master of Business Administration in Marketing.

How the University Helped:
I received financial aid and scholarships from the D.D. Hachar Scholarship Fund and Lamar Bruni Vergara Trust. I truly appreciate the support these scholarships afforded me!

Lessons Learned:
Taking classes with Drs. Norma E. Cantú, Jeffrey Cass and Cecilia Garza. I greatly enjoyed and looked forward to their classes because they were so passionate about what they taught and challenged me to think more creatively.

1995, BA, Sociology
1998, MA, Sociology
Associate Director of Corporate and Foundation Relations at Loyola University, Chicago

NANCY GARZA

1996, MBA-International Trade
Vice President and Project Manager for JP Morgan Chase & Co
Dallas

Now:
Vice President and Project Manager for JP Morgan Chase & Co.
I am on the Board of Directors of Fine Arts Chamber Players, a non-profit organization that provides free concerts and music education programs to the Dallas-area community. Also, I am a classroom volunteer for Junior Achievement and a State Chairman for Daughters of the American Revolution.

How Being An Alum Helps:
Like my husband, I was contacted prior to graduation by someone I had worked with previously. He felt that my MBA experience could benefit his project.

Lessons Learned:
It was a wonderful experience attending graduate school with my husband Jonathan. We took many of the same courses, knew the same professors, had the same friends and helped each other succeed. Also, I enjoyed working in the Office of the Registrar and making friends from around the world!

Biggest Surprise:
The biggest surprise would be that I moved to Chicago.

Proud of:
I am mostly proud of being in a profession where I have the capacity to make a significant and broad impact in a non-profit organization. As a fundraiser, my work is vital in the creation of new programs, expansion and enhancement of existing programs, technology and capital improvements, and long-term sustainability of the organization. I volunteer numerous hours throughout the year as Event Committee Member of the Latino Community Donor Awards, an annual event coordinated by Latino professional fundraisers and grant makers that honors Latinos who make financial contributions to Latino nonprofit organizations in Chicago.

Get Back Here?
I was born and raised in Laredo, but have been residing in Chicago since 1998. I travel to Laredo three to four times a year to visit family and friends.

Every life has meaning. Every life has purpose.

How we choose to bring our life to meaning and our life to purpose is as varied as the stars in the heaven.
TAMIU alumni are no exception. No matter when their degree was earned, or under which institutional identity, all find that their degrees help them to create lives of purpose and meaning. Whether those lives are meted out in classrooms or boardrooms, emergency rooms or time-out rooms, they offer a daily ramification of the importance of higher education.

Now over 9,000 strong with representatives around the corner and around the world, the University’s alumni are force for change, a force for good and a force to be reckoned with.

Here, we profile four alumni and their lives of purpose.

Biggest Surprise for Your Classmates:
I don’t think there is anything about me that would surprise them! We go skiing every year in Colorado and we go to different islands to snorkel. I like to attend musicals and the symphony.

Proud of:
I am proud that I made the sacrifices I did to attend TAMIU.
The blackboard is curiously bare, anchoring a forgotten corner. No gentle dusting of chalk coats the floor. A single chalk stick rests safely cocooned in a lifetime of cobwebs. This classroom corner appears little used.

But the remainder of the room offers a colorful contrast. A constant swirl of lights, figures, formulas and images dance in mid-air on what appears to be a fluid screen floating at eye level. Seated students surround the display, their faces washed in an ever-changing glow, while a benevolent figure coordinates the apparently spontaneous exchanges among students, mentor and screen. Fingertips touch the screen at various junctures and images cascade about with dizzying variety.

Is this a scene from a science fiction movie? For the time being, perhaps. For the near future, perhaps not. Technology and higher education are linked more clearly now than palm pilots and daily to-do lists. And it’s a marriage, that while uneasy at first, is destined for greater success.

At Texas A&M International University that marriage is being strengthened by a commitment to employing current and emerging technology to create educational experiences that are powerful, relevant and lasting.
Dr. Dan Jones, TAMIU provost and vice president for academic affairs, said redefining higher education through technology has a curious and lengthy history.

“We can actually look back as far as the 1950’s with the development of so-called ‘sunrise semester classes,’ television broadcasts of credit courses that aired early in the morning before the day’s regular programming began. Through the years we’ve followed with correspondence courses, distance ed, compressed video, and the Big Bang of the 90s, the internet and the virtual classroom. All are different, but similar in their desire to use technology to bridge distances, increase access and make learning possible anywhere and often, anytime,” Dr. Jones said.

Today’s TAMIU classroom is more likely to find professors and students exchanging information via dedicated web sites, using multi-media to enhance class learning and, in some cases, conducting the course completely on the internet with on-line sessions taking the place of face-to-face interaction.

“We call those classes that combine technologies supplemental courses and they comprise about 150 of our total Fall classes. Those classes that are completely on-line number about 10 or so for the Fall, but grow with each passing semester,” Jones explained.

He said that continued growth seems a given with the University’s dedication to helping faculty members and students embrace the emerging educational technologies.

“It’s a brave new world, and one that requires adaptation on the part of both the faculty and student. We provide our faculty with support and training through our Education Technology Outreach office and help them to develop a technology comfort zone while supporting their development of content for the new teaching environment. We also help them to adapt their teaching style to an electronic environment. With students, we offer training materials, on-line support and workshops,” Jones explained.

Is the on-line student different from the traditional classroom student?

“I would say not. Both need to be motivated, disciplined, appreciate the class structure and be invested in their program completion. However, some professors report that they do see increased class participation from on-line students who can be timid in traditional classrooms,” he noted.

And what about the fear that on-line courses could somehow replace traditional classroom experience?

“A University without contact just isn’t acceptable. There is so much about the University experience that simply cannot be replicated in an on-line environment. I don’t think we can ever expect one to substitute for the other, but I would say that both have the capacity to support and inform the other,” he said.

Jones said the University considers itself committed to emerging educational technologies and expects to grow with the field.

“We are already utilizing national standards for on-line instruction and are committed to keeping ahead of emerging technologies in the classroom. At this time we have amazing capabilities in place. Students have embraced this technology and I’m sure they’ll help lead the charge that will help make its use more commonplace. There will certainly always be a place at the table for technology in higher education,” he said.

What might the TAMIU classroom of the future bring?

“I certainly expect greater use of technology, but I believe it will be much less intrusive, more adaptable and more responsive to different levels of communication. I think we’ll finally see technology more as friend than foe, a given versus an extra… and that it will redefine how we interact with each other in all aspects of life. I’m looking forward to seeing it,” he smiled.

Steve Harmon

In Spring 2004, 2,700 TAMIU students were enrolled in at least one class that was supported by some form of educational technology.

This Fall, TAMIU will offer 10 courses conducted entirely online.

In Spring of 2005, TAMIU will offer its first degree to be conducted entirely online...a Masters of Science in Criminal Justice.

Utilizing collaborative technologies, TAMIU works with Texas A&M University, Texas A&M-Corpus Christi and Texas A&M University-Kingsville to deliver masters and doctoral degree classes so that students need to leave Laredo is less.

Just as students learn by emerging technologies, faculty are also learning to embrace these technologies and the new pedagogy that they encourage. Some now refer to web-based teaching methods as “web-agogy.”
Texas A&M International University’s campus has seen tremendous growth over the past years, and not just physically. Currently, TAMIU offers 58 undergraduate, graduate or doctoral degrees, 16 of which were added in the last five academic years.

Below are the most recently added degrees and semester first offered:

- Masters of Public Administration ........................................ Fall 99
- Bachelor of Science in Environmental Science .......................... Fall 99
- Ph.D. in Curriculum and Instruction ...................................... Fall 99*
- Bachelors of Social Work .................................................... Spring 00
- Masters in Generic Special Education ................................... Summer 00
- Bachelors of Arts in Urban Studies ...................................... Fall 00
- Masters in Curriculum & Instruction ..................................... Summer 01
- Bachelors of Arts in Latin American Studies ......................... Fall 01
- Bachelors of Arts in Music ................................................. Fall 02
- Bachelors of Music ............................................................... Fall 02
- Bachelors of Music with all level certification ....................... Fall 02
- Bachelors of Arts in Art ...................................................... Fall 02
- Ph.D. in International Business .......................................... Spring 04
- Ph.D. in Hispanic Studies .................................................. Spring 04*
- Ph.D. in English ................................................................. Spring 04*
- Masters of Science in Nursing, Family Nurse Practitioner ........ Fall 04

* denotes a joint degree program with Texas A&M University – College Station.

TAMIU will continue to add degrees and programs to ensure South Texans can get what they want out of life.

Jessica Ratliff

Soon, a pyramid sheathed in shimmering glass will glow on the Texas A&M International University campus. Within, a mirrored orb will encaise a room that can take us all on a journey to the stars.

The new Lamar Bruni Vergara Science Center, scheduled to open next Spring, may become the University’s most striking architectural feature, and perhaps its most visited building. The Science Center will be home to a planetarium, the only facility of its kind for much of South Texas.

It honors the memory of the late Lamar Bruni Vergara, a Laredo philanthropist whose vision of assisting higher education has been continued by the trustees of the Lamar Bruni Vergara Trust. The Trust provided a generous gift of $2 million in support of the Center. It has also offered stunning support for other University programs, student scholarships and, most recently, the lush Lamar Bruni Vergara Memorial Garden that fronts the TAMIU Student Center.

“It’s going to be an inspirational setting for students, faculty and our community,” assured Dr. Nasser Momayezi, dean of the College of Arts and Sciences.

Home to the College’s growing science programs, the Center will feature offices, and some 30 labs to enable both research and teaching components. The Center makes possible expanded programming in biology, chemistry, geology, earth sciences and engineering.

“We are expanding our offerings and our faculty to accommodate a dramatic
Little Card Brings Big Changes to TAMIU

W hange is coming to Texas A&M International University, but this time it’s small, small enough to fit in your wallet. The new TAMIU OneCard, replacing all old TAMIU ID cards and required for all students faculty and staff, will be in use starting Fall 2004.

Albert Chávez, ID system administrator, said although it looks like a redesigned ID card, the difference is more than skin deep, offering increased convenience and excellent record tracking.

“With the OneCard, you can make purchases without carrying cash or getting money from the ATM,” explained Chávez, “You can use the card at any of the campus eateries, at the library to make copies or pay fines, and to pay for parking permits with the University Police. In addition, you can get a report of all your transactions on-line, so you’ll know how much money is left on the card and where it all went.”

With a magnetic strip, the OneCard utilizes a prepaid, stored-value account containing “Dusty Dollars,” a convenient, cashless way to pay for goods and services on campus, said Chávez. Money can be added in one of three ways: at the Business Office; by using a self-serve Value Transfer Station located throughout campus; or online at http://onecard.tamiu.edu, where a credit card will be required.

For current students the OneCard is included in tuition and for faculty and staff, replacing an old ID card with the OneCard will be free. Thereafter, lost or misused cards can be replaced with a $7 fee.

New students will receive OneCards when they register, and current students, faculty and staff will be able to replace their

increase in interest in the sciences,” Momayezi explained, “For example, this Fall we will have 225 students that have declared majors in biology.”

Momayezi said the new Center will also make possible planned expansions into engineering which he believes will find rapid interest from current and future students.

“We plan to offer an engineering degree with initial specializations in industrial, mechanical and systems engineering, but have a five-year goal of bringing a full School of Engineering to TAMIU...something we believe will have remarkable relevance here,” he smiled.

Momayezi is also excited by the centralized opportunity for faculty and student exchange that the Center makes possible.

“For the first time, labs and offices and classrooms in the sciences will be centrally located in one building. We are incorporating all sciences, including the social sciences, so I believe this will create a unique dynamic for faculty and students,” he said.

Still, he seems to reserve his most energetic appraisal of the 77,920 gross-square-foot project for its 85-seat planetarium. He animatedly reveals that only one other Texas A&M University System campus; Tarleton State University in Stephenville, has an operating planetarium.

“I think the planetarium will be a popular destination on campus, and for Laredo and South Texas. We’re looking at a special series of weekly shows, educational programs that take advantage of our strong partnerships with local school districts and group showings for visitors to the campus. A search for a planetarium director is now underway. The director will also have a faculty appointment. We believe we could easily welcome some 20,000 visitors to our campus in our first year of operation,” he said.

A special opening for the new Lamar Bruni Vergara Science Center is scheduled for March of next year.

For additional information, contact the Office of Public Affairs and Information Services at 956.326.2180, click on tamiu.edu or e-mail pais@tamiu.edu

New Housing Creates New Opportunities at TAMU

The opening of the new 424-bed Residential Learning Community will signal a new era at Texas A&M International University. Both the new facility and the existing 254-bed University Village will be managed by TAMU and no longer by outside contractors and the feel and make up of the campus will experience a change once more undergraduate students reside on campus 24 hours a day.

Dr. Tom Corti, vice president for Student Affairs, said both innovations will be good for the campus.

“We’re committed to making student housing an extension of the learning continuum. We’re all looking forward to creating a dynamic environment for living and learning,” Dr. Corti explained.

He said the benefits of living on campus may appear obvious at first: a short walk to classes, the library, or professors’ office hours.

“Even non-scholarly activities, such as having a cappuccino with a friend, or enjoying a night out are made easier through TAMU’s convenient location,” said Corti. “But the real benefits of on-campus living are actually invisible. Studies show on-campus students have higher GPAs and a more successful collegiate experience. By absorbing the University atmosphere, we hope our residential students will learn more, both during class and afterwards.”

Corti explained the University strives to make residential life supportive and fun, and has created five themed floors.

“We created the themed floors to help students get the most out of the residential life experience. The 24-hour Quiet Floor is for students who are serious about academics and want to live with others who feel the same. There will be fun times, but the focus is on studying,” explained Corti. “The Health Professions Floor will put those planning a future in the medical profession in close proximity. Anyone interested in the arts will enjoy the Performing Arts Floor, which should resonate with music, art and theater. The Wellness/Substance Free Floor will group students who want a healthy lifestyle and we’ll also be offering a female only floor.”

The new residential learning community opened in August. For more information, call 956.326.0160, click on www.laredovillage.com or e-mail info@laredovillage.com

“We’re committed to making student housing an extension of the learning continuum. We’re all looking forward to creating a dynamic environment for living and learning,”

Dr. Tom Corti
The Texas A&M International University homepage has long been both guide and portal to a vast amount of information for University students, staff, faculty and alumni. Whether you’re in Finland or Freer, Cadiz or Chicago, with tamiu.edu you’re home… and with well over 72 million successful hits (since Oct. 2002), people certainly do come home. But like all homes, sometimes there’s a need for a little refreshing. And a dab of paint just won’t do. So we’re proud to present the new tamiu.edu, launched this summer.

To refresh tamiu.edu, our team combined equal parts of great design, streamlined navigation and rich, relevant content. That design, much more than visuals, graphics image formats, sound files, and typography, also requires planning that knows and reaches our audience.

Winning web design works hand in hand with the functionality and navigation of the site. In its latest incarnation, the TAMIU homepage has been re-designed for potential and current students and potential and current partners.

Along the way, a broad-based campus group of students, faculty and staff balanced functions with content that is accessible for all visitors.

Ultimately, we’ve designed an embracing site that celebrates TAMIU with an open and browser-friendly design.

You’ll find a navigation menu that groups needs in a logical pairing of information, providing easier access that dramatically reduces the number of user clicks and page loads. For more on design and content features, see the diagram above and at right.

The University’s web site includes a staggering 28,000-plus active pages and grows daily. With but a few clicks, potential students can springboard to explore how TAMIU can impact their higher education. Potential partners can learn about Texas’ newest University and its remarkable mission in South Texas.

But perhaps most importantly, the new design provides a way to a new home for some and an old home for others…and a confirmation that you truly can click home.

TAMIU Nursing Graduates Excel

Texas A&M International University’s Dr. F.M. Canseco School of Nursing graduates are excelling, demonstrating a hometown education can help you get what you want out of life.

Dr. Susan Baker, director of the School of Nursing, reported 93% of this Spring’s Bachelor’s of Science Nursing graduates passed the National Council Licensure Examination for Registered Nurses (NCLEX-RN), the national licensure examination required for entry into practice as a Registered Nurse, on their first attempt.

“We’re above the national average pass rate for graduates, which is only 86.9%,” said Baker.

“This particular graduating class really stepped up to the challenge—they waited to start work until they had tested; they continued to study as hard or harder from the day they graduated until the day they tested; they bought new review books, met in study groups, coached and nagged each other, came to the campus to work on our computer programs and review videos and ask faculty questions about areas of doubt,” she explained.

University Launches English Collaborative Ph.D.

Texas A&M International University launched a fourth collaborative Ph.D. with Texas A&M University as lead partner in ceremonies held in April in the Western Hemispheric Trade Center foyer. Joining University representatives for the announcement was Robert Gates, president of Texas A&M University.

The Ph.D. will be in English and is being coordinated by the TAMU department of English and the TAMIU department of language and literature.

The University’s other collaborative Ph.D. programs include Curriculum and Instruction, Educational Leadership and Hispanic Studies. The University’s first stand-alone Ph.D. in International Business Administration will be awarded by the College of Business Administration.

TAMIU Students Honor Senator Judith Zaffirini

During the ninth annual Texas A&M International University Life Awards Ceremony, hosted by the TAMIU Student Government Association (SGA), State Senator Dr. Judith Zaffirini was presented with a special recognition in appreciation of her hard work and dedication by SGA president, Carlos Ramos.

Ramos said the event was a great success, with more than 250 students in attendance, and the highlight of the event was Senator Zaffirini’s heartfelt and emotionally moving speech to the students.

“Throughout her nearly 18 years in the Legislature, Senator Zaffirini has authored and passed the majority of legislation that has helped bring TAMIU to its current state,” said Ramos, “As a result of her working on the Appropriations Conference Committee, she has been able to secure over $324 million for TAMIU. Many of the current facilities on the TAMIU campus were built as a result of these state dollars.”

Remarkable $500,000 Gift from LBV Trust

Trustees of the Lamar Bruni Vergara Trust presented Texas A&M International University officials with $500,000, the final installment of a $2 million pledge, in ceremonies held at TAMIU in late July. The funds will support the Lamar Bruni Vergara Science Center, now nearing completion.

The Science Center, part of the University’s Phase IV expansion, will house a growing science program, labs, classrooms and faculty offices. Some 30 labs will offer both research and teaching components and make possible expanded programming in biology, chemistry, geology, earth sciences and engineering.

Interest in the sciences at TAMIU by students is considerable, with 225 students declaring majors in biology.

‘TAMIU Unplugged’ Continues Expansion

Texas A&M International University students now have another wireless site on campus to connect to the Internet. “TAMIU Unplugged,” the University’s wireless network, has now been expanded to the Student Center.

This past Spring, the University launched “TAMIU Unplugged” with service throughout Killam Library. By doing so, TAMIU joined only 60 percent of cutting-edge universities across the nation that have designated wireless areas of their campuses for student, faculty and administrative use.

Lakshmana Viswanath, director of the University’s Computer Telecommunications Services, said the expansion is the latest in a planned series of wireless access sites on campus.

TAMIU has International Honor Society in Education

Kappa Delta Pi (KDP), the International Honor Society in Education, now has a charter in place at Texas A&M International University.

In ceremonies this May at the TAMIU Student Center, the new Chapter was launched by Dr. Sherry Field, KDP vice president. Chapter initiatives included 47 University undergraduates, graduates and members of the TAMIU College of Education faculty.

A select group of 20 incoming freshmen at Texas A&M International University are the first students to benefit from a $400,000 scholarship gift from the Sánchez Family Foundation.

Starting this Fall, the students, known as Sánchez Scholars, will receive the Antonio R. and Maria G. Sánchez Family scholarships. This summer, the students met with Foundation members Antonio R. "Tony" Sánchez, wife Maria G. "Tani" Sánchez and their daughter, Ana Lee to express their appreciation to the family.

All were uniform in their gratitude, and in their pledge to merit the Sánchez’ blessing on their lives. Some candidly admitted that were it not for the scholarship, they would not have been able to continue their education.

Antonio Sánchez, clearly moved by the students’ words, said the Foundation’s gift should be considered an investment by the Foundation in the future of Texas. "We have long maintained that higher education is the only true catalyst to change. The scholarships reflect a commitment to the city and state that has been a home to us for generations and that continues to bless us," Sánchez explained.

The scholarships provide books, fees and tuition for a four-year degree program completion.

For additional information, contact the Office of Financial Aid at 956.326.2225, visit offices in Killam Library 158 or e-mail financialaid@tamiu.edu

Some people graciously open doors so that others may walk through. Sometimes, those who open such doors change lives.

Zapata banker and philanthropist Renato Ramírez is one such person. This summer, he pledged Texas A&M International University a gift of $1 million in support of student scholarships.

Dr. Ray Keck, TAMIU president, said the gift was generous and will have an impact for years to come.

“This is truly an astounding act of generosity that will impact our students’ lives for generations to come. Mr. Ramírez’ philanthropy is legendary in South Texas and beyond and we are much blessed by his including this University in his giving,” Dr. Keck said.

Ramírez said his gift acknowledges his own pride as a graduate of Texas A&M University and desire to help TAMIU, part of The Texas A&M University System.
Representing Webb County in the Miss Texas Pageant is Margaret Garza, a freshman at TAMIU. Jorge Váldez ’01 and Lizette Mendive ’02, TAMIU alumni, help welcome her.

Dr. and Mrs. Ray Keck smile proudly while riding the TAMIU float in the 2004 Washington’s Birthday Celebration Parade.

Leah Longoria is among the first to establish a planned giving gift to TAMIU. Ms. Longoria has bequeathed a portion of her estate to be used to establish future student scholarships. The fund will be known as the Leah Fields Longoria Scholarship Fund.

A gathering of San Antonio TAMIU alumni was held on August 18, 2004 at Duke’s.
