NURS 4299 A two-hour seminar course theory and/or clinical. An in-depth focus upon current issues impacting Global health and the profession of nursing. Open to all RN/BSN students with permission of instructor.

1. Define and identify issues related to global health and the practice of nursing.
2. Analyze issues related to global health and incorporate this into the planning of health care across the life span.
3. Identify the professional nurse's role in addressing designated global health issues.
4. Identify national and global policy issues that affect global health
5. Exercise critical thinking ability to determine relevant nursing theory and research essential to global health in selected settings.
6. Incorporate appropriate management principles, taking into consideration environmental and cultural differences, in the coordination of human and material resources for planning and providing nursing care for patients across the life span.
7. Utilize communication skills to develop professional relationships that facilitate effective interactions with patients and their families in collaboration with other health care personnel in selected settings.
